Window Films

HEAT CONTROL

If you have room or offices that get too hot from direct sunlight, consider installing a **Heat Control Window Film** to keep them cooler. Our films reflect the sun's heat, ultraviolet rays, and reduce glare without obscuring your view. Unlike blinds or drapes, a Heat Control Window Film allows natural light in while enhancing comfort.

Save money on your energy bills. You won't have to turn the thermostat down and freeze the rest of your house or workplace to stay cool.

HEAT CONTROL

Different types of **Heat Control Window Films** are available for glare- and heat-blocking power, allowing you to obtain up to 83% of heat rejection. From the outside these films can make your windows look like elegant mirrors or have a silver or bronze color. Inside, you can enjoy delicate, light blue light.

HEAT CONTROL

Besides making your house more comfortable in the sun, our film can remove virtually all (99%) of the harmful UV rays. This protects your furniture from fading and helps keep wood from drying out.
